Did you Know?

A human body grows more during the initial two years of its life than during the rest of your life.

The human brain is about three times bigger than any other animal's brains of our size.

The ears and nose of humans continue to grow.

Parts of the Body

Investigate!

- Have a go at making your own life sized model, use paper and draw around your body and label all of the parts.
- Visit your local library and discover some fun facts about the human body.
- Use pasta and recreate a skeleton using different shapes for the bones. Can you name any of the bones?
- Can you make some healthy snacks at home, work with an adult to prepare a healthy dish. Can you write the recipe to share with our class?
